

Annual Report of the Anti Malaria Campaign 2008

Introduction

The number of malaria cases reported during the year 2008 continued to decline. The total number of reported case was 670 positives, which comprised of 623 vivax infections and 47 falciparum &/or mixed infections. Out of 670, positive cases, 500 were from security forces due to prevailed war condition in the northern province in the year 2008.

The continuing conflict remains the main such factors which could seriously affect malaria control efforts in the country. Considering these factors and the able guidance provided by the Hon. Minister of Healthcare & Nutrition and the Department of Healthcare & Nutrition, the Anti Malaria Campaign continues with the implementation of a programme of action to further reduce the burden of malaria in the country.

The campaign continues to develop and implement a programme of work that can be successfully implemented in both the cleared areas of the country, and the uncleared areas of the Northern Province. This programme has taken into account the difficulties faced in implementing a control programme in the conflict-affected areas of the country and the recently cleared eastern districts and has succeeded in reducing the burden of the disease in these areas as well.

A matter of serious concern to the campaign and the malaria control efforts in the country is the lack of interest shown by provincial health staff in some districts to continue carrying out the activities under the malaria control programme. The mistaken belief that malaria is no longer a cause for concern in these districts could result in jeopardizing the malaria control efforts not only in these particular districts but could affect the entire country as well. It is therefore important for all concerned to continue to contribute actively to the malaria control efforts in the country.

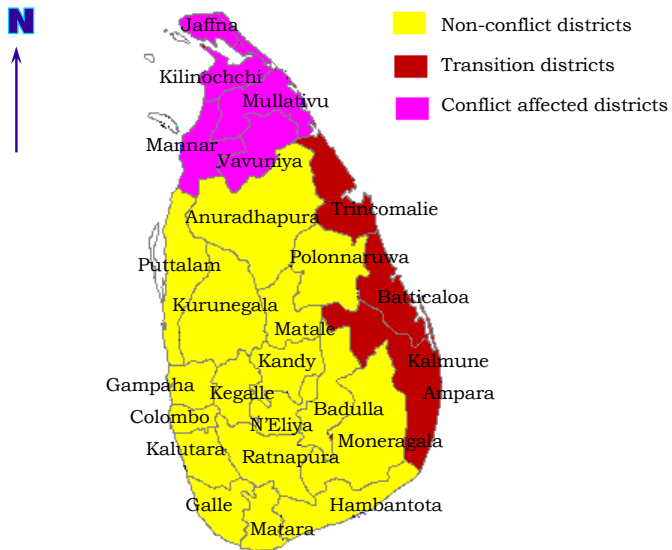

Considering the present favourable malaria situation in the country the Anti Malaria Campaign reorganized the objectives and strategies of the campaign. The revised objectives and strategies of the Anti Malaria Campaign are as follows;

Objectives of the Anti Malaria campaign

- To eliminate indigenous *P. falciparum* malaria by the year 2012 in non-conflict & transitional areas of the country.
- To eliminate indigenous *P. vivax* malaria by the year 2012 in 75% of non-conflict & transitional areas of the country
- To reduce API in conflict affected areas to 75% of the API reported in 2007, by the year 2012.
- To maintain zero mortality from malaria in Sri Lanka

Strategies of the Anti Malaria campaign

- To provide early diagnosis and prompt treatment of malaria patients and asymptomatic parasite carriers.
- To plan and implement selective & sustainable vector control measures based on the principles of IVM.
- Forecasting, early detection, prevention of outbreaks, and the rapid & effective containment of outbreaks.
- To reassess regularly the country's malaria situation, in particular the ecological, social and economic determinants of the disease and evaluation of malaria control activities.
- Enhance community participation and partnership building for effective and sustainable malaria control.
- Promotion of human resource development and capacity building
- Promotion of operational research.

Epidemiology

The district-wise morbidity pattern in Sri Lanka has undergone drastic changes during the last two decades due to the conflict situation prevailing in several districts of the Northern and Eastern Provinces. Prior to the period of conflict, only a very small percentage of the total country-wide morbidity was recorded from these districts. From the year 2000, there has been a reduction in the incidence of malaria. A total no. of 1047104 blood smears were examined by the Anti malaria Campaign during the year 2008. There were 670 confirmed malaria cases out of which 623 were *P.vivax* infections and the rest had *P. falciparum*, *P.m.* or mixed infections (29- *Pf*, 1- *pm* and 17 -mixed infection). Out of 670 confirmed malaria cases, 24 infections were imported from other countries. The highest recorded no. of malaria infections was reported from Kilinochchi district (60%) in the year 2008. The prevailing war condition in Kilinochchi district contributed to this situation. The districts of Kilinochchi, Mullativu, Mannar and Vavuniya contributed largely to the total country morbidity in the year 2008. The proportion of indigenous falciparum cases reported was 5% in year 2006 to 3% in year 2007 and 5% in year 2008.

Table 1 : Parasite formula 2001- 2008

| Year | Proportion of <i>P.vivax</i> infections | Proportion of <i>P.falciparum</i> infections |
|------|---|--|
| 2003 | 88 | 12 |
| 2004 | 85 | 15 |
| 2005 | 92 | 8 |
| 2006 | 95 | 5 |
| 2007 | 97 | 3 |
| 2008 | 93 | 7 |

When compared with other South-East Asian countries mortality due to malaria in Sri Lanka is extremely low. There was no deaths reported in the year 2008.

Figure 1. Microscopically confirmed malaria cases (district wise) - 2008

Factors influencing the morbidity and its distribution

Several districts in the North-East Province became hyper endemic for malaria during the last decade as a result of the conflict situation which prevail in this province. Various problems encountered during the malaria control activities, specially the ones which are field-based, and additional factors like the presence of displaced populations who are highly vulnerable to malaria infections, have contributed towards the high incidence. During the year 2008 there seems to be a significant increase in malaria transmission in the districts of Kilinochchi, Mullativu, Vavuniya, Mannar.

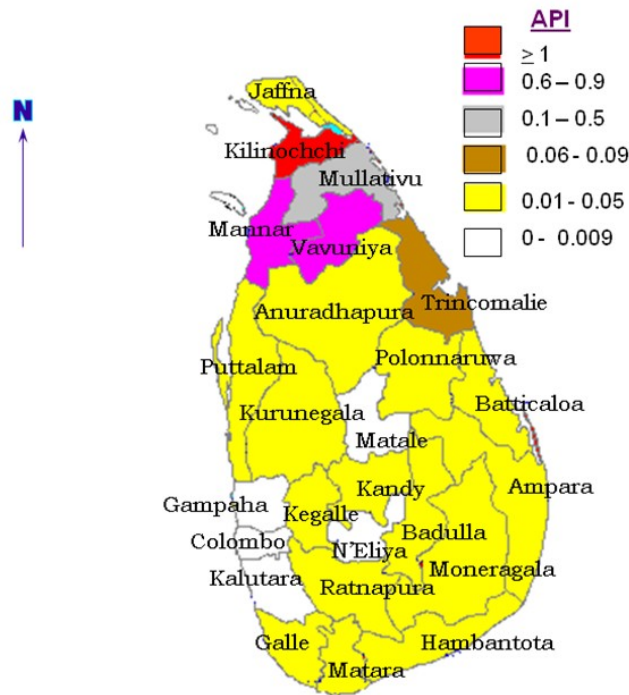

Figure 2 : Intensity of malaria Transmission in Sri Lanka (represented district-wise) 2008

Surveillance

Surveillance mechanism of the malaria control programme is implemented mainly through Activated Passive Case Detection (APCD). All fever patients attending State Medical Institutions located in malarious areas are screened for malaria parasites by examination of a blood smear. In addition Passive Case Detection (PCD) is carried out in the other State Medical Institutions by screening suspected malaria patients. Active Case Detection (ACD) is carried out through Mobile Malaria Clinics which operate in malarious localities situated far away from Medical Institutions. Detection of cases by home visits is done under special circumstances (egs. local outbreaks). The Anti Malaria Campaign recommends screening all fever patients that come to an APCD institution for malaria. However, the number of blood smears taken in such institutions has decreased over the years, as the malaria disease burden has fallen down drastically. In spite of that during this year, as in the previous years, screening suspected malaria patients that come to activated medical institutions (APCD) is the most important method of detection of malaria cases, accounting for 77% of the cases detected. Active case detection (ACD) and Mobile clinics (Other methods) are done as a

measure to detect malaria cases early (including asymptomatic parasite carriers) there by preventing transmission.

Information Management

Many of the Regional Malaria Offices have been equipped with computer facilities to enable the officers to utilise the gathered data (parasitological and entomological) in a meaningful manner. Monthly reports are received at the Anti Malaria Campaign Headquarters which regard to the following.

- (a) malaria morbidity and mortality (age-wise and sex-wise)
- (b) entomological data regarding adult vector and larvae.
- (c) vector control activities carried out.
 - adulticiding
 - larviciding

Action is underway to complete provision of computer facilities to all the Regional Malaria Offices and subsequently to establish networking facilities (with the assistance of GFATM Project).

Epidemics/outbreaks

The following parameters are used to forecast epidemics.

- (a) monitoring of larval densities in sentinel stations.
- (b) monitoring of adult vector densities in sentinel stations, and by random spot checks.
- (c) regular observation of fever incidence / and malaria morbidity in Medical Institutions.

There were no major epidemics reported in the year 2008. Few outbreaks were reported in the districts of Kilinochchi, Mullativu, Mannar and Vavuniya.

Action taken to prevent and control of these outbreaks:

- (a) Enhanced case detection and treatment
 - By field surveys
 - At Medical Institutions

(b) Vector Control Activities

- Chemical larviciding
- Indoor Residual Spraying of insecticides.
- Health education programmes.

Status of Drug Resistance and Drug Policy

Drug resistance

P.vivax - no chloroquine-resistance reported.

P.falciparum - resistance to chloroquine reported since 1984.

During the year 2008, the treatment regimen for falciparum malaria has been changed in line with the global practice and in view of eliminating falciparum malaria from Sri Lanka by 2012. The artemisinin combination therapy was introduced to Sri Lanka for the treatment of falciparum malaria and Director General of Health Services was issued a circular No 01-14/2008 on 7th May 2008 regarding change of treatment for falciparum malaria and management of malaria patients. The circular was attached in Annexure 1.

Drugs Policy

Plasmodium vivax

Chloroquine - 3 days Primaquine - 14 days

Plasmodium falciparum

First-line treatment

Artemether- Lumefantrine (20mg/120mg) – for 3 days

Primaquine - Single dose treatment

Second line treatment

Quinine

Primaquine (given only if no primaquine has been administered within the preceding week).

Parasitological surveillance

For the year 2008 there were 670 microscopically confirmed malaria cases in the country. Of these, there were only 46 *Plasmodium falciparum* cases 1 *P.malariae* case. Majority of cases were reported from Army personnel in the North and East districts. *Plasmodium malariae* case was an imported case reported from a person who has gone to Liberia.

The number of blood smears examined and number of microscopically confirmed malaria cases in each district is given in table 1.

| DISTRICT | B.F. | +VES | <i>P.v.</i> | <i>P.f.</i> | <i>P.m.</i> |
|------------------|---------|------|-------------|-------------|-------------|
| Colombo | 66552 | 6 | 3 | 3 | |
| Gampaha | 47563 | 3 | 1 | 2 | |

| Moneragala | 39637 | 4 | 3 | 1 | |
| Ratnapura | 19317 | 3 | 3 | 0 | |
| Kegalle | 5960 | 5 | 1 | 4 | |
| Total | 1047104 | 670 | 623 | 46 | 1 |

Provision of Laboratory Items

The Central laboratory distributes laboratory items required for malaria microscopy to regional malaria offices. Some laboratory items (required for microscopy) issued during the year 2008 are given in table 4.

Table 4: Laboratory items distributed :

| District | Lancets | Giemsa stain | Slides | Methanol | Anisole | Ethanol | Cotton wool |
|--------------|---------|--------------|---------|----------|---------|---------|-------------|
| Ampara | 30000 | 2 | 2376 | 0 | 0 | 0 | 1 |
| Anuradhapura | 20000 | 11 | 13640 | 6 | 1 | 0 | 0 |
| Baddulla | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| Batticaloa | 25000 | 3 | 5000 | 1 | 2 | 1 | 1 |
| Colombo | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

| Nuwara eliya | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| Polonnaruwa | 20000 | 1 | 2500 | 0 | 1 | 1 | 1 |
| Puttalam | 45000 | 0 | 9708 | 3.5 | 0 | 0 | 1 |
| Trincomalee | 75000 | 18 | 35040 | 2 | 3 | 0 | 0 |
| Vavuniya | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| GRAND TOTAL | 507,800 | 93 | 164,568 | 21 | 24 | 7 | 9 |

Cross checking

Central laboratory of the AMC directorate, also functions as the reference laboratory for malaria microscopy. One of the main functions of the central laboratory is the cross checking

of the blood smears received from different regional malaria offices. All positive blood smears and a percentage of randomly selected negative blood smears are cross checked to confirm the accuracy. Based on the cross checking results and the supervision of the PHLTT, if a PHLT is found to be performing poorly refresher training is given to that person. During the year 2008, 23,427 negative blood smears, 79 *P. vivax* positive blood smears and 1 *P. falciparum* and *P. vivax* mixed blood smear were received for cross checking.

Vector surveillance

A total of 27 malaria vector surveillance programmes were carried out by three central entomological investigation teams in 13 Districts during the year 2008. These included routine sentinel monitoring investigations and foci investigations. Districts covered were Galle (four times), Anuradhapura, Puttalam, kurunegala and Moneragala (three times each), Matale, Ratnapura, Ampara and Polonnaruwa (two times each), Kalutara, Badulla and Hambantota (once each). In addition, several programmes were carried out for Dengue and Leishmaniasis vector surveillance in Ratnapura and Hambantota districts respectively.

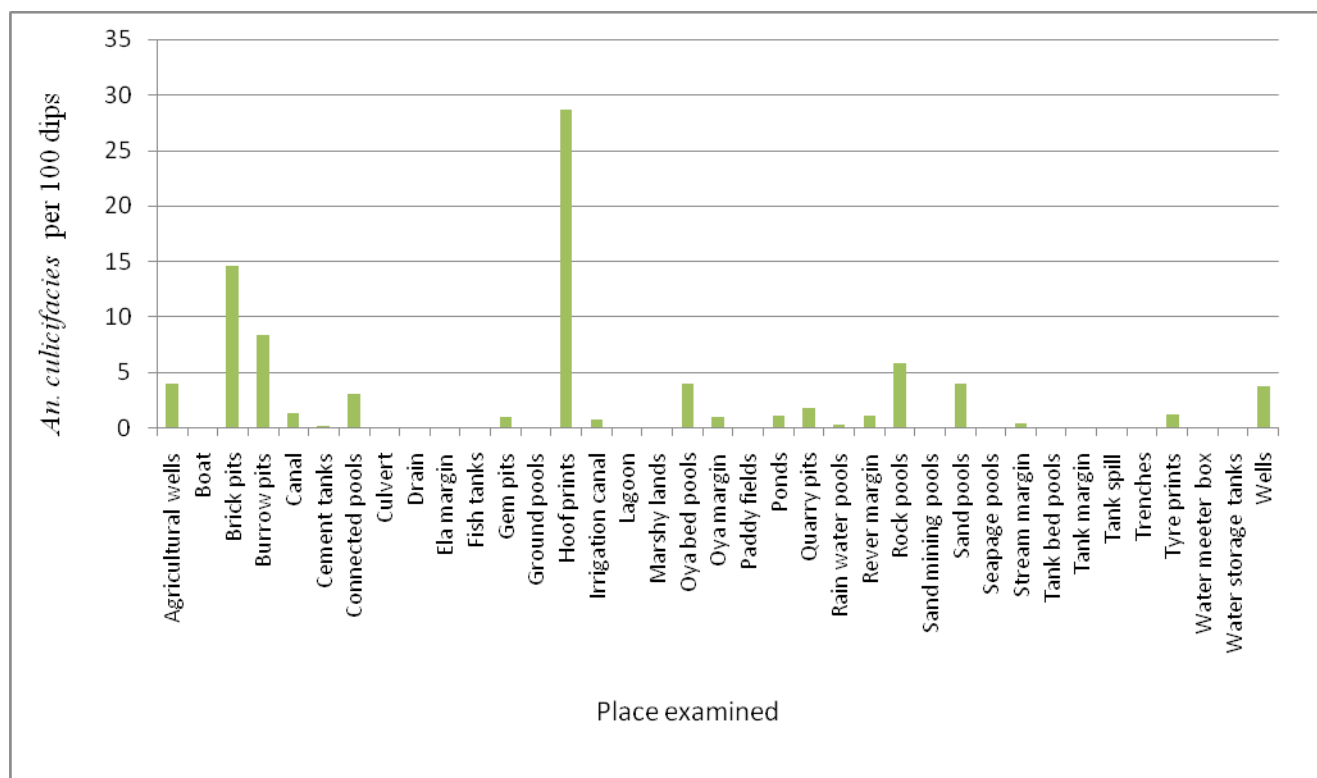

Data obtained from the investigations of the central teams and the data sent by the regional teams were computerized. Summarized results are shown in Table 1 to 10.

Larval surveys were carried out to determine the breeding places of vector mosquitoes in all the districts of the island except in Kilinochchi, Mullaitivu, Vavuniya and Mannar districts as they were war affected during the year 2008.

Table 1: Results of larval survey carried out during 2008

| Type of breeding place | No of dips | No. of I& II instar larvae | No of III & IV instar larvae | <i>An. culicifacies</i> per 100 dips | <i>An. subpictus</i> per 100 dips | <i>An. annularis</i> per 100 dips | <i>An. varuna</i> per 100 dips |

Figure 1: Breeding places of *An. culicifacies*

The larval collection data obtained for the major vector species *Anopheles culicifacies* and other three minor vector species are summarized in the Table 1 and Figure 1. Brick pits, burrow pits, rock pools, sand pools, river bed pools, agricultural wells and hoof prints were the main habitats for breeding of the major vector *Anopheles culicifacies*. Several atypical breeding places of *Anopheles culicifacies* sampled were found to be negative for *Anopheles culicifacies* larvae.

The indoor resting densities of major vector *Anopheles culicifacies* and other potential vector species were determined by the Pyrethrum Spray Sheet Collections in localities sprayed with residual insecticides and in unsprayed areas. The results obtained are summarized in Table 2.

Table 2: Results of Pyrethrum Spray Sheet Collections carried out during 2008

Human Landing collections showed low rates of indoor human biting compared to outdoor biting of *Anopheles culicifacies* in sprayed areas. Outdoor biting the potential vectors was also common in sprayed areas. Summarized results of partial night collections are shown in Table 3.

Table 3 : Results of Human Landing collections – 2008

The persistence of the insecticides used for Indoor Residual Spraying on various insecticides were determined using the standard WHO bioassay test procedures. The data obtained for susceptible female mosquitoes of *Anopheles culicifacies* and other three potential vector species are summarized in Tables 5 and 6.

Table 5: Results of the Bio Assay tests on sprayed surfaces using wild caught blood fed mosquitoes (30 minutes exposure period)

The results obtained for Cattle Baited Cadjan hut collections, Cattle baited Trap Collections and window Trap Collections are summarized and given in Tables 8,9 and 10.

Vector Control Activities

In Sri Lanka, malaria vectors are mainly controlled by a strategy of integrated vector management. Integral components of this strategy are the rational use of insecticides in rotation for indoor residual spraying (IRS), distributing long lasting insecticide treated nets (LLINs), breeding and introduction of larvivorous fish, environmental modulation and modification through the filling of abandoned gem pits, imprefnation of mosquito nets with permethrin and space spraying for special occasions. Table shows the insecticides that had been used for indoor residual spraying in different districts.

Larvivorous fish mainly "Guppi" (*Pocilia reticulata*) were introduced in to wells and abandoned gem-pits as a biological method of vector control.

Table 8. Insecticides that had been used in different districts for indoor residual spraying

| District | Deltamethrin | Cyfluthrin | Etofenprox | ICON | Fenithrithion |
|--------------|--------------|------------|------------|------|---------------|

The total number of houses fully sprayed were 189090, partially sprayed 17551 during the year of 2008, and the total population covered was 727432.

Table 9 Utilization of insecticides for malaria vector control operations in 2008

| Insecticides | Usage during 2008 |
|--|--------------------------|
| Indoor Residual Spraying | |
| Deltamethrin 5% wdp (1 barrel = 11.25kg) | 11428.63 kg |
| Cyfluthrin 10% wdp (1 barrel = 9 kg) | 3056.26 kg |
| Fenithrothion 40% wdp (1 barrel = 9.25 kg) | 16263 kg |
| Lambdacyhalothrin 10% wdp (1 barrel = 20kg) | 22539.04 kg |
| Etofenprox 20% wdp (1 barrel = 9kg) | 7546.5 kg |

Two hundred and fifty three thousand Permethrin impregnated long lasting insecticide impregnated nets, which were donated by the World Health Organization, were distributed among the malarious areas.

Table 10 Distribution of Long Lasting insecticides treated nets for Malaria Control

| District/Institution | No. of LLINs distributed during 2008 |
|-----------------------------|---|
| 1. Kalmunai | 4000 |
| 2. Trincomalee | 15000 |
| 3. Killinochchi | 11500 |
| 4. Mannar | 11500 |
| 5. Pollonnaruwa | 10000 |
| 6. Anuradhapura | 12000 |
| 7. Mullathavi | 11500 |
| 8. Puttalam | 20000 |
| 9. Moneragala | 20000 |

| | |
|----------------|---------------|
| 10. Kurunegala | 19000 |
| 11. Maho | 18000 |
| 12. Matale | 18000 |
| 13. Batticaloa | 9500 |
| 14. Hambantota | 20000 |
| 15. Ratnapura | 18000 |
| 16. Jaffna | 20500 |
| 17. Vavuniya | 11500 |
| 18. Ampara | 3000 |
| Total | 253000 |

Administration

At the end of year 2008, AMC Headquarters had following category of staff. The below table shows the number of staff in each category as at the end of year 2008.

Table 11. Staff position at Anti Malaria campaign Headquarters - 2008

| Category of Staff | | Approved cadre | In position | |
|-------------------|--------------------------------------|----------------|-------------|--------|
| | | | Male | Female |
| 1 | Administrative Grade MOO | 02 | - | - |
| 2 | Community Physicians | 03 | 01 | 01 |
| 3 | Parasitologist | 01 | - | 01 |
| 4 | Entomologist | 02 | - | 02 |
| 5 | MOO Gr I | 01 | - | - |
| 6 | MOO Gr II | 04 | 02 | 02 |
| 7 | MOO Preliminary | - | - | - |
| 8 | Accountant | 01 | - | 01 |
| 9 | Development Assistant | - | 02 | 02 |
| 10 | Management Assistant | - | - | - |
| 11 | Data Entry Operator | 02 | - | 01 |
| 12 | Public Management Assistant Services | - | - | 01 |
| 13 | Store keeper | 03 | 03 | - |
| 14 | Public Health inspectors | 02 | - | - |
| 15 | Entomological Assistant | 05 | 03 | 02 |
| 16 | Public Health Field Assistant | 10 | 04 | 02 |
| 17 | Public Health Laboratory Technicians | 22 | 03 | 09 |
| 18 | Cinema Operator | 01 | - | - |
| 19 | Driver | 19 | 08 | - |
| 20 | K.K.S. | 01 | 01 | - |
| 21 | Roneo Operator | 01 | 01 | - |

| | | | | |
|----|----------------------------|------------|-----------|-----------|
| 22 | Lab Orderly | 03 | - | 01 |
| 23 | Spray Machine Operator | 19 | 13 | - |
| 24 | Ordinary Labourer | - | 07 | 03 |
| 25 | Sanitary Labourer | - | 35 | 02 |
| 26 | Labourer (Casual) | - | 01 | - |
| 27 | Registered Medical officer | - | - | 01 |
| 28 | Ward Clerk | - | - | 02 |
| | Total | 102 | 84 | 33 |

Vehicles-

Adequate number of vehicles in good condition is an important factor in effective malaria control activities throughout the country including the north and east. At present AMC Headquarters has the following number of vehicles. In 2008 there were two new vehicles added to the pool and another two had been removed from the pool.

Table 12 Vehicles available at Anti Malaria Campaign Headquarters

| Type | Road Worthy | Available at HQ |
|------------------------|-------------|-----------------|
| Mitsubishi Fuso Lorry | | |
| i. 42-1607 | Yes | Yes |
| ii 42-9399 | Yes | Yes |
| iii LC-0249 | Yes | Yes |
| Mitsubishi Pajero jeep | | |
| 32-6520 | Yes | Yes |
| Mitsubishi L200 | | |
| i. 42-1615 | Yes | Yes |
| ii GP-2558 | Yes | Yes |
| iii GP-2556 | Yes | Yes |
| Mitsubishi Double-cab | | |
| JL 8129 | Yes | Yes |
| Toyota D/Cab | | |
| GQ-2646 | Yes | Yes |
| Nissan Caravan | | |
| NA-3117 | Yes | Yes |
| Ford Ranger D/Cab | | |
| PA-4589 | Yes | Yes |

| PB 6537 | Yes | Yes |
| Micro D/Cab | | |
| PB 6539 | Yes | Yes |

Drugs

A buffer stock of antimalarial drugs to face any emergency is available in the Headquarters. The following table shows the number of different types of tablets distributed to the RMO regions in the year of 2008.

Chloroquine tablets

| | |
|----------------------------------|-----------|
| Amount in stores in January 2008 | - 45 500 |
| Amount received in 2008 | - 421 000 |
| Amount issued in the year 2008 | - 416 000 |

Table 13 .the Distribution of Chloroquine tablets from Headquarters

| RMO region | Amount |
|--------------|--------|
| Maho | 10000 |
| Embilipitya | 5000 |
| Matale | 18000 |
| Puttalam | 9000 |
| Hambanthota | 75000 |
| Kurunagala | 5000 |
| Anuradhapura | 55000 |
| Kandy | 6000 |
| Mannar | 5000 |
| Vavuniya | 10000 |
| Badulla | 2000 |
| Kegalle | 2000 |
| Ampara | 3000 |
| Kalmunai | 2000 |
| Batticaloa | 13000 |
| Monaragala | 7000 |
| BH Horana | 2000 |
| Headquaters | 3000 |
| D/ Army/ MS | 157000 |
| Air Force | 27000 |
| Total issued | - |

Primaquine tablets

| | |
|----------------------------------|-----------|
| Amount in stores in January 2008 | - 400 000 |
| Amount received in 2008 | - 72 000 |
| Amount issued in the year 2008 | - 59 750 |

Table 14 Issue of Primaquine tablets from Anti Malaria Campaign Headquarters 2008

| RMO Region | Amount |
|--------------|--------|
| Kandy | 5000 |
| Hambanthota | 3750 |
| Maho | 2500 |
| Ampara | 2000 |
| Kurunagala | 2000 |
| Batticloa | 5000 |
| Embilipitiya | 9000 |
| Monaragala | 2000 |
| Kalmunai | 2000 |
| Vavuniya | 10000 |
| Polonnaruwa | 2000 |
| Puttalam | 2000 |
| Kilinochchi | 2000 |

| Total | 230 |

Buildings

The Anti Malaria Campaign Headquarters is located at the Public Health Complex at 555/5, Elvitigala Mawatha, Colombo 5. The Director's room, the project director's room of GFATM, Consultant Community Physicians room, Medical officers room, Accounts division of GFATM project, the Public Health Inspectors room, The Library, The Computer room, the telephone exchange and the Auditorium are in the 3rd floor. The Administration branch, finance branch, the Accountants room and stores are located in the 5 th floor. The Central Parasitology Laboratory and Parasitologist's room, Entomology Laboratory and Entomologist's room and Record room are located in the 6th floor.

Foreign funded malaria control activities in the year of 2008

During the year 2007 GFATM WHO assisted malaria control activities in Sri Lanka.

WHO technical assistance to the malaria control programme in 2008 was under the 2007/2008 biennium programme of the Country Budget and consisted of the following activities.

- **National Strategic Plan for Malaria Control Programme 2008-2012 was formulated and printed.**
- **Introduction of revised Malaria Control Strategies to district and provincial level health staff including COMBI strategy.**

Four programmes were conducted in 4 districts to introduce revised malaria control strategies

- **Training of one Medical Officer engaged in fulltime malaria control to participate in the “International Training Course on management of malaria” in Thailand.**

One officer was trained in Thailand on management of malaria

- **Training of clinicians in management of malaria patients including use of ACT.**

Five programmes were conducted in 5 malaria endemic districts on management of malaria

- **Procurement of S&E necessary for entomological surveillance and some drugs for management of malaria patients**

Critical equipment for entomological and parasitological laboratories were procured and distributed

- **Introduction and implementation of revised monitoring and evaluation tools to district**

Ten programmes were conducted to introduce revised M&E tools at province level

Assistance from the Global Fund to fight AIDS, Tuberculosis and Malaria (GFATM)

During the year 2008, National Malaria Control Programme continued to receive support from the GFATM in the form of two grants for malaria control under the Round 1 and Round 4. Both assistance projects are jointly implemented through a partnership between the Ministry of Healthcare & Nutrition and Lanka Jathika Sarvodaya Shramadana Sangamaya of Sri Lanka. The GFATM Round 1 Malaria Control Project was started in 2003, and the Round 4 project in 2005.

GFATM Round 1 Malaria Control Project

This project funds malaria control activities in 12 conflict-affected districts in Northern, Eastern, North Central & Uva provinces. The project mainly focuses marginalized populations in the districts of Anuradhapura, Polonnaruwa, Jaffna, Killinochchi, Mullaitivu, Mannar, Vavuniya, Trincomalee, Ampara, Kalmunai, Batticaloa and Moneragala.

The following activities were carried out during the year 2008

- **Conducting malaria mobile clinics in high risk areas.**

Under the GFATM project, malaria mobile clinics were conducted in all the project districts for early detection & prompt treatment of malaria patients and asymptomatic carriers. A total of 1209 malaria mobile clinics were conducted (98% of target achieved) at which 107,058 blood smears examined during 2008 from the 12 project districts.

In general, the criteria for selection of a site to conduct mobile malaria clinics were

- malaria case/s reported from the locality
- remote areas with poor access to health care institutions (>10 kms from institution)
- traditionally malarious areas
- mobile population groups – displaced people due to war
- development areas
- new settlers

- **Distribution of Rapid Diagnostic Test-kits (RDTs) to improve diagnostic facilities.**

A total of 10,000 RDTs were purchased and distributed among project districts. These RDTs were mainly distributed to Medical Institutions without a Public Health Laboratory Technician to carry out microscopy. In addition other Government Medical Institutions in project districts were also provided with RDTs to enhance diagnosis and improve case management.

- **Enhanced entomological surveillance.**

Four additional days per month in a district were funded through the project to augment the entomology component of the Provincial Malaria Control Programmes with the view of forecasting and preventing malaria outbreaks and epidemics in the districts. Overall a total of 570 entomological days of surveillance were carried out using project funds.

Sites for entomological surveillance are

- sentinel sites in each district
- random sites based on case load, fever cases and other development activities.

- **Maintenance of vehicles used for malaria control in project districts.**

Vehicles repairs were done in Mullativu, Vavuniya, Kilinochchi, Kalmunai & Trincomalie using GFATM Project funds.

- **District level in-service training programmes.**

Five hundred and seventy five field staff were given refresher training in year 2008 (PHFOO, PHII, PHLLT, PHFOO & SMOO) in project districts

- **Procurement of essential laboratory equipment and reagents**

Twenty microscopes were purchased & distributed among project districts to enhance parasitological and entomological activities.

- Twelve monthly reviews on GFATM activities in project districts with the participation of Regional Malaria Officers, Technical Staff of AMC Headquarters and representatives of Sarvodaya / Lions, were conducted at Anti Malaria Campaign Headquarters to assess the progress of work qualitatively and quantitatively. These meetings were chaired by the Deputy Director General of Public Health Service, Dr. P.G. Mahipala.

GFATM Round 4 Malaria Control Project

This project aims at scaling up efforts of the national Malaria Control Programme focus on poor, vulnerable populations living in six epidemic-prone districts which are at increased risk for malaria due to occupational factors. The districts are Moneragala, Matale, Ratnapura, Kurunegala, Puttalam and Hambantota. The Project is jointly implemented through a partnership between the Ministry of Healthcare & Nutrition and Lanka Jathika Sarvodaya Shramadana Sangamaya of Sri Lanka

The following activities were carried out during the year 2007 under this project.

- **Conducting malaria mobile clinics in high risk areas.**

Four hundred and eighty eight malaria mobile clinics were conducted (99 % of target achieved) to reduce malaria transmission among vulnerable and mobile populations through early detection and treatment. A total of 29,903 blood smears examined from all 6 project districts and one positive case of *P.vivax* was detected from mobile clinics in Puttalam.

In general, the criteria for selection of a site to conduct mobile malaria clinics were

- malaria case/s reported from the locality
- remote areas with poor access to health care institutions (>10 kms from an

institution)

- traditionally malarious areas
- mobile high risk occupational groups – eg. Chena cultivators, gem miners, people working in quarry pits
- development areas
- new settlers

- **Distribution of Rapid Diagnostic Test-kits (RDTs) to improve diagnostic facilities.**

A total of 15,000 Rapid Diagnostic Test kits were purchased & distributed among project districts in 2008 to enhance malaria diagnosis. These RDTs were mainly distributed to medical institutions without a Public Health Laboratory Technician to carry out microscopy. In addition other government medical institutions in project districts were also provided with RDTs to strengthen diagnosis and management of malaria patients.

- **Enhanced entomological surveillance.**

Four additional days of entomological surveillance were funded through the project to augment the entomology component of the Provincial Malaria Control Programme with a view to forecasting and preventing malaria outbreaks and epidemics. Accordingly 270 additional entomological surveillance days were funded by the project.

- Strengthening of entomological & parasitological laboratories at district level by providing necessary equipment & consumables

Hand lenses, digital hygrometers, dissecting sets, forceps, larval vial tubes and chemicals for entomological investigations were purchased during this period for strengthening of regional laboratories.

- **District level in-service training programmes.**

Five hundred and eighty two field staff were (PHII, PHFOO, PHLTs, PHFO & SMOO) received refresher training for updating knowledge and skills in environment friendly malaria control methods.

- **Operational research studies.**

A research project to evaluate the relative efficacy of two larvicides (Temephos & Pyriproxifen) was carried out in Kurunegala and Puttalam districts.

Another research study was initiated in February 2007 in Matale district to study anopheline vector bionomics in Sri Lanka.

- Twelve monthly reviews on GFATM activities in project districts with the participation of Regional Malaria Officers, Technical Staff of AMC Headquarters and representatives of Sarvodaya / Lions, were conducted at Anti Malaria Campaign Headquarters to assess the progress of work qualitatively and quantitatively. These meetings were chaired by the Deputy Director General of Public Health Service, Dr. P.G. Mahipala.
- Four District Level Review Meetings with Regional Malaria Officers and other provincial level health authorities were conducted in Hambantota, Matale, Moneragala and Puttalam for the purpose of assessing the progress of activities in the project districts, and also to discuss various matters with the intention of improving the project implementations.
